

# Exploring W3C Provenance with *Annalist*

## Goals/benefits/outcomes:

1. Learn about W3C provenance model
2. Create example provenance data
3. Create Annalist definitions for capturing provenance information
4. Provide feedback for future Annalist development to better support provenance recording

## Tasks:

1. Identify an interesting online dataset
2. Create core provenance model description in Annalist, based on W3C PROV
3. Add example data to core model
4. Choose some extensions, add these, update example data
5. Select some non-PROV elements, add these to the model and update example data
